of the toyon. This custom was a very typical and often extremely cruel form of exploitation. The winter upkeep of the livestock was a still more burdensome, enslaving agreement; in return for a head of cattle, the toyon usually paid 1 ruble, 50 kopeks or 2 rubles for the whole winter, whereas in actual fact the upkeep cost at least 5 rubles, and so it was only the poor peasants driven by need who entered into such agreements.

A still more typical custom, the origin of which in ancient times was connected with mutual assistance between clan members, but which later became in fact one of the forms of exploitation, was kumalaanism. A kumalaan was a poor peasant, a disabled person, an orphan or sometimes all the members of an impoverished family, who were assigned by the whole community to live for a certain time with a rich man or wealthy kinsman who would maintain them. Officially, the adoption of a kumalaan was regarded as an act of charity, and a way of helping a kinsman in need. But in actual fact the custom concealed the cruelest exploitation of unpaid labor. In many cases it was a disguised form of slavery and lasted a long time.

Another form of disguised slavery was the sale of children, which flourished particularly in the Olekminskiy Okrug. Parents who had reached the stage of abysmal poverty were often forced to sell their children, and well-off Yakuts sometimes bought them (when they had no children of their own) in order to bring them up, but more often in order to have unpaid labor. Their treatment of them was usually barbaric; they were half-starved and forced to do exhausting work. The demand for children was so extensive that in the Olekminskiy Okrug there were professionals (old women) who traded in children as an occupation.

There were also various forms of commercial exploitation, some of which, again, were inherent in the Yakut conditions. One such form for Yakutiya was the activity of the so-called "city-men." These were people, mainly from distant regions, who constantly made trips to towns where they had business contacts and sold and bought commodities on behalf of their fellow villagers in return for a commission from the latter. The city-men, apart from the agreed fee, could always obtain extra profits by speculating on the difference in prices, obtaining credit, and so on. Little by little the city-man began to trade in imported goods in his own ulus and turned into a full-fledged merchant. This was one of the ways in which the new Yakut commercial bourgeoisie formed side by side with the semifeudal toyons.

By the end of the 19th century, the Yakut commercial bourgeoisie was already a strong force. The Yakut merchants not only exploited their own fellow townsmen, but also penetrated into the taiga, into the Evenk and Yukagir hunting camps, where they gave the hunters liquor and enslaved them in usurious debt. In the trading regions, in the outlying parts of Yakutiya, Yakut (and Russian) trade capital enslaved the people in the most merciless ways.

As a result of all this highly varied and extremely cruel exploitation, the position of the masses of the Yakut population was lamentable. The poor people sometimes went hungry the whole year around, even in the summer, during the peak season when the hard work of haymaking needed a sound diet. "The Yakut does not take much notice of the fact that his children are always half-starved," wrote V. F. Troshchanskiy, "both because this is the normal state of affairs for the majority of Yakut children, and also because he himself, his wife, his very old parents, his livestock, his dog and his cat are half-starved

53:Tokarev and Gurvich E-4 (no date) 1964
RV2 Yakut RV2

the whole of their lives, and only occasionally eat their fill . . . it is a country of systematic starvation."[4] But the Yakut toiling masses were particularly badly off during the long and severe Yakutiyan winter. "The periods of hunger," wrote another observer, "when there is absolutely nothing to eat, when all the crumbs have been picked up and consumed, when the cows carrying calves are not milked, and nature, paralyzed by the cold, firmly resists all attempts to find food, are repeated every year and two-thirds of the Yakut population have to suffer for a fairly prolonged period on this account."[5]

On the other hand, individuals with fortunes of tens of thousands of rubles stood out among the wealthy Yakut hierarchy. The wealthy estates developed mainly through trade and various kinds of speculation, although the owners did not hesitate to apply the old patriarchal-feudal methods of exploitation in amassing their wealth.

Crushed by the omnipotence of the toyons, the masses of poor people in the ulus hardly dared to protest or fight for their rights. It was only now and then that the toyon oppression gave rise to outbursts of protest, but these were sporadic and promptly suppressed. This was the fate of the revolt of Vasiliy Manchara (1830-1850), hero of the Yakut legends.

Given the sharp class contradictions, it was extremely characteristic that certain very archaic survivals were retained in the Yakut social structure and left on it their own strange imprint. Some of these survivals were nothing more than form devoid of its original content.

Right up to the Revolution the Yakuts retained their division into clans (*аймаки*). But the clans were purely administrative units legalized by the "Native Code" of 1822, although they were historically descended from the ancient clans of the clan-tribal stage.

At the head of these administrative clans stood elected elders (who were called in the old-fashioned Yakut language "princelings" (kinees, or achchygyy kinees—"small princeling"). Several clans banded into a nasleg, which was also governed by an elected elder (in actual fact often hereditary), known in the Yakut language as ulakhan kinees or "great prince," who together with the clan elders made up the "clan administration." A group of naslegs formed an ulus, at the head of which there was an elected ulus head and a "native council." The ulusy, and also some of the naslegs, and even the clans, were historically associated with the ancient Yakut tribes, whose names they continued to bear—for example, the Meginskiy, Borogonskiy, Baturusskiy, Namskiy, Western and Eastern Kangalasskiy and other ulusy, the Betyunskiy, Batulinskiy, Ospetskiy and other naslegs.

At the end of the 19th century there were in all 17 ulusy, divided into 230 naslegs and 934 clans in the Yakut district (in the four okrugs—Yakutskiy, Vilyuyskiy, Verkhoyanskiy and Kolymskiy, since in the fifth—Olekminskiy Okrug—the ulusy were replaced by volosts of the Russian type).

Only the terminology of the tribal structure was retained in this administrative system. In actual fact, the tribal administrations and native councils were only organs of power of the ruling toyon stratum

field have been of tremendous benefit. Many hundreds of specialists are now at work in the field of agriculture and among them there are quite a few veterinary surgeons and technicians with higher education. Horse-breeding is also being successfully developed.

The income received by collective-farm members is an indication of the considerable progress made in the collective-farm system. For example, in 1955 the Yershov family from the Red Partisan collective farm in the Churapchinskiy Rayon, consisting of four members, completed 22,500 labor units[1] and in the final accounting received 100 poods of grain, 48 poods of meat, 69 poods of oil, more than 30 poods of vegetables, 2 foals and more than 5500 rubles in cash.

For each labor unit completed at the Red Star collective farm in the Aldanskiy Rayon in 1955 the farmer received a payment of 32 rubles and 50 kopeks.

High incomes are also received by cattle breeders in the northern regions. On the Victory collective farm in the Olenekskiy Rayon, 808,000 rubles were spent in payment for labor units in 1954. For each labor unit the payment was 16 rubles in cash and 210 grams of meat; each household received an average income in cash of 11,400 rubles.

Trapping, Fur-Farming and Fishing

There are 22 species of fur-bearing animals in the Yakut ASSR. Trapping is one of the main occupations of the population of northern Yakutiya. On account of the indiscriminate extermination of the reserves of fur in Yakutiya many species of animals such as the otter, sable, and dark-brown fox had almost entirely disappeared by 1917. The Revolution put an end to the extermination of these fur-bearing animals. It also did away with the centuries-old enslavement of the hunting and trapping population in debts by commercial capital. One of the first steps taken by the Soviet authorities was to annul the debts to merchants on the part of the hunters and to prohibit the private buying up and resale of furs. Hunting seasons were introduced and the hunting of declining species of fur-bearing animals was prohibited or restricted. The reconstruction of hunting led to Yakutiya's becoming one of the chief suppliers of furs. Over the last few years the Republic has provided 20-25 percent of the All-Union output of furs. An important part in development of planned hunting has been played by the hunting-trapping stations (POS) set up from 1931 to 1933. These stations instructed hunters and trappers in new techniques of hunting and fitted them out with the necessary equipment. The chief hunting weapon is the small-caliber rifle and carbine. Use is made of imported traps and local self-trapping devices. Use is made of improved self-operating devices which prevent the pelts' being damaged, for example, the "trough-fall." The collective farms equip hunters with means of transportation, tents, stoves, and ammunition. The weapons are usually the hunters' personal property. The advanced trappers in the polar-fox regions have at their disposal 200-300 traps each and 100-150 springtraps of improved design. Many squirrel-hunters have from 400 to 500 fall-snares. During the

[1] The labor unit (trudoden') is the standard of unit of payment on collective farms. It is set at a fixed rate in cash and produce for each farm but may vary from year to year. Different jobs are rated differently as to number of labor units for an actual day's work.—Ed.

53:Tokarev and Gurvich E-4 (no date) 1964
RV2 Yakut RV2

474 and the Stalin farm in the Megino-Kangalasskiy Rayon. The first of these
[621] barely numbered 10 households in the 30's when first organized, but now
[433] unites 265 individual households. This collective farm has many different branches. It has 1200 hectares of ploughland, 3000 hectares of meadowland, 2700 hectares of pastureland, and upward of 3000 head of livestock. The collective farm has seven subsidiary farms for dairy-farming, horse-breeding, reindeer-breeding, poultry and pigs. Since 1953, fox and rabbit
[377] have been reared on it. The farm has two power stations. The electricity
[234] is used for purposes of illumination, threshing and cleaning the seed, grinding grain and sawing wood. An electric milking system for the cows is being introduced.

Well-designed houses, schools and hospitals have been constructed in
474 the collective-farm settlement. It has its own club, library and radio-
368 relay station. A park has been made near the settlement, and there is also a stadium. Films are shown regularly and amateur concerts are often organized.

474 The Stalin collective farm in the Megino-Kangalasskiy Rayon became
311 the largest collective farm in the Republic as soon as the neighboring
433 collectives merged with it. By government decree, it is the possessor of 67,000 hectares of land, of which 2798 hectares are ploughland, and almost 11,000 constitute meadowland and pastures. The remaining land is taken up by forests. The collective farm sows almost 800 hectares of wheat, 720 hectares of spring and winter rye, more than 250 hectares of oats and bareley, and 55 hectares of vegetables and potatoes. In 1955 there were about 3500 head of cattle on the farm, more than 1200 horses, 250 reindeer, and more than 100 pigs; furthermore, the collective farm has a subsidiary poultry farm and a section for breeding fur-bearing animals.

474 At the present time the collective farm has three small power stations
[377] with a total output of 125 kilowatts. The electricity is used for threshing
[246] grain, driving a sawmill and operating lathes. In view of the increased generation of electricity the farm has mechanized the delivery of fodder to the byres. There are more than 500 different types of machines, 6 trucks, 2 passenger cars and 12 engines on the farm.

[434] In 1955, the farm's income was 2,700,000 rubles. The material status of the farmers has been considerably improved.

At the same time their cultural standards have increased.

[212] There is not one single illiterate person on the farm: 120 farmers have
[871] a secondary education or higher, 10 of them are studying at universities and 165 in tekhnikums and secondary schools. Many of the collective-farm members return to their own farms after receiving their education.

[233] Great progress has been attained by the northern farms of the Nizhne-
[224] Kolymskiy, Bulunskiy, Olenekskiy, Anabarskiy and other rayons. Their
[563] achievements are due to the overall reorganization of reindeer-breeding and the trapping industry. On many of the farms there are Yakuts, Evenks, Chukchi and other minorities all working together.

Socialization of the reindeer and the creation of large herds has made it
474 possible to introduce such veterinary measures as stage-by-stage nomad-
232 izing based on the rotation of pastureland, inoculations, and day and night
233 guarding of the herds. In the past Yakutiyan reindeer-herders never made use of dogs, which, for example, among the Nentsy make the work of the herdsmen easier. Nowadays reindeer-herding dogs are used extensively in the Nizhne-Kolymskiy, Allaikhovskiy and Bulunskiy Rayons.

474 The northern collective farms have not confined themselves to the tradi-
433 tional branches of economy, namely, reindeer-breeding, hunting and fishing,
233 and are courageously developing new branches. On most of the

53: Tokarev and Gurvich E-4 (no date) 1964
RV2 Yakut RV2

reindeer-breeding collective farms there are now dairy and horse-breeding sections.

The Stalin Even-Yakut collective farm in the Nizhne-Kolymskiy Rayon (formerly known as the Sutanya-Udëran) is successfully developing reindeer-breeding alongside horse-breeding, fishing and hunting. The collective contains more than 17,000 reindeer. In 1955 more than 850 tsentners of such important species of fish as whitefish and baranatka were caught. In 1955, 215,000 rubles worth of furs were delivered to the State. The gross monetary income of this collective farm was 2,430,000 rubles; 1,423,000 rubles were distributed to the collective-farm members for labor units, and for each labor unit the payment was 17 rubles cash, 1.04 kg of meat and 720 g of fish. The monetary income per household averaged 24,000 rubles.

Despite the fact that the chief branches of industry of the northern farms have required periodic migration on the part of the population, all the farms have constructed settlements or collective-farm centers. As an example we can take the settlement of Kolymskaya, the center of the Turvaurgin collective farm. This center contains the headquarters of the farm administration, an incomplete secondary school with boarding facilities, a hospital, a shop, a house of culture with a library, a trading station, a power station, bathhouses, a dairy farm, and 50 standard farmhouses. The farm recently acquired an S30 tractor, a launch and two motorboats. In ethnic composition the Turvaurgin collective farm is multinational and consists of Chukchi, Yukagirs, Yakuts and Evenks.

New Way of Life

A considerable obstacle in the way of the implementation of cultural and public-health program in Yakutiya between 1920 and 1930 was the scattered nature of Yakut settlements due to the ancient occupation of pastoralism. One, two or three yurts together was the predominant type of "settlement." The combining of them into larger units was further required by the everyday farming needs of collective farms.

The construction of settlements under Yakutiyan conditions was a major achievement in socialist reconstruction of the Yakutiyan countryside. It provided an opportunity for installing radio and telephone on the farms and providing them with medical and cultural-educational institutions. In 1950 the construction of settlements in southern Yakutiya was by and large complete. The farm settlements are usually located on elevated riverbanks or by the shores of lakes and consist of several parallel streets. Generally speaking, timber houses rather than yurts are built in these settlements. The center is reserved for the school, collective-farm administrative offices, medical center and club. On many farms yurts are used as work premises. There are quite a few settlements with power stations. In the Megino-Kangalasskiy Rayon alone there are 14 farm power stations with a total output of more than 510 kilowatts. Radio-relay systems have been installed in many of the new settlements. The farmers live in the settlements when they are not out working.

Although several types of farmhouses have been developed, they are still far from perfect. The rigorous climate makes particular demands upon the housing construction in Yakutiya. Special forms of heating are used in the new houses, such as triple frames—the first frame is a single one, while the second is inserted during the winter and has two panes of
